Cambodia birding report April-May 2017

Mikko Pyhälä - 28 June, 2017

Photo below: Male White-rumped Pygmy-falcon, endemic to Indochina

While on a holiday in Cambodia with my wife Pia, I was able to make exclusively birding trips with guide and facilities provided by the Sam Veasna Center (SVC) in the North in Preah Vihear Province and in the South-East in Mondulkiri Province, as well as on my own in the South in the Kep Province. I also birded in the gardens of the capital city Phnom Penh. SVC based in Siem Reap is Cambodia’s oldest and perhaps also the most competent birding company having obtained much praise from WWF, UN, GEF, BirdLife and other organizations. They have been successful in establishing community-based lodges and camps with local services, contributing to local conservation consciousness, in particular for some of the most endangered birds and animals of the planet. SVC excels in training their guides who are very knowledgeable about birds, work well with local communities, and are efficient and polite with their clients. SVC has also been able to avoid conflicts with national authorities.
Cambodia is a good target for birding trips as it has a large number of endemics and many critically endangered species, also animals such as the Dolphin, and large primates in the Seima forest. I managed to get 45 lifers, almost all of them from my wish-list which was not very long, given that I had birded earlier in South-Asia, Vietnam, Thailand, Malaysia and Indonesia. My overall list of species on this trip surpassed 200 species in about five days of intensive birding. I am using the nomenclature and order of species as in Handbook of the Birds of the World (Lynx Edicions and BirdLife 2014, 2016). I have uploaded over 60 pictures in Internet Bird Collection website.

April is often said to be the most difficult month to visit Cambodia due to excessive heat, close to 40°C. We did encounter that kind of temperatures, but also because the first months of 2017 had brought exceptional rains, these brought relief. All my birding days were practically without rain, which often only started in late afternoon. Some bird species were quite active, but a few species I had expected to see were in total hiding, perhaps due to their reproductive cycle. I am most grateful to my superb and well-equipped guides, Ms. Kunthea Chhoun in the North, and Mr. Pech Mogn in the South-East. Without their expertise and dedication I would have been miserable. My accommodation at the Tmatboey Community Lodge in the Preah Vihear Province near the Thai border was very comfortable and the snake (probably harmless Indochinese Rat Snake) coiled at my doorstep kindly withdrew without hassle not to be seen again. They even had laundry service, most welcome. The local community guide Mr. Rathi Ry was just amazingly knowledgeable.

The tented Jahoo Gibbon Camp at the Seima Protected Forest was also quite comfortable. I spent a few nights in Sen Mondulkiri town at Phanyro Motel which was clean and functional. My wife and I spent three days in Siem Reap visiting the Angkor Wat temple complex, several days at our friends’ home in Phnom Penh, and several days in Kep Province in the South. Our friends Ventzislav and Anita Ivanov were very generous and helpful, and excellent company while in Siem Reap, Phnom Penh and Kep. I contracted private transport from Vuthy Transport for the drive from Phnom Penh first to Kratié to see the Irawaddy Dolphins and then to Seima Forest, and back from Sen Monorum to Phnom Penh. My driver Mr. Kha was fluent in English and pleasant company.

I took malaria pills only for my stay in the Seima forest, even though malaria is not a big problem there. Leeches were present only in Seima but did not bother me much. Not once did I have digestive problems. Served and pack meals prepared by the communities were very good. We were impressed by the smiles and friendliness of the Cambodian people.
Bengal Florican grasslands, Siem Reap Province

Leaving Siem Reap early in the morning on 24 April with Kunthea we first drove south less than an hour to the Prolay-Wat grasslands which are efficiently managed by the local community as the preferential ecosystem for the critically endangered Bengal Florican, of which we saw 12 displaying males and one female. (Photo of second summer male in flight r).

Our first important observation, however, was of two Oriental Plovers (picture l) on their return journey from Australia back to Mongolia – often sought by birders here but seldom seen. I was truly lucky to see them, thanks to the surveying by local community guides who led us to the location with their motorcycles. They found for me one White-browed (Manchurian) Reed-Warbler, and near that I also saw Ruddy-breasted Crake and Asian Blue Quail. This was the only location where I had many observations of Horsfields’s (Australasian) Bushlark, Striated Grassbird and Common Buttonquail (photo of chick r). We saw four Sarus Cranes fly by – they have a wintering site in Kep Province near the Vietnamese border. The most common birds were Oriental Pratincole (picture of adult b), Asian Palm Swift, Asian Green Bee-eater, Blue-tailed Bee-eater, Oriental Skylark, Paddyfield Pipit, Eastern Spotted and Red Turtle-dove, and Pied Bushchat. In lesser numbers, there were White-breasted Waterhen, Pacific Golden Plover, Red-wattled Lapwing, Little Ringed Plover, Chinese Pond-heron, Bluethroat, Black-shouldered Kite, Green Sandpiper, Common Greenshank, Zitting Cisticola, White-browed Fantail, Asian Pied Starling, and one female African Comb Duck with a flock of Indian Spot-billed Ducks.

We stopped near Koh Ker to observe a female White-rumped Pygmy-falcon at the nest. No male was seen. There were also Indochinese Rollers, Sooty-headed Bulbuls, Crested Serpent-eagle and Indochinese Bushlark.
Tmatboey, Preah Vihear Province

We arrived at the Tmatboey Community Lodge about 3 p.m. and with some dark clouds in the sky, decided to go for the critically endangered Giant Ibis almost right away (picture of perched adult after sunset r).

I managed to get nice pictures of Rufous-winged Buzzard perched in a tree right next to the lodge during the break (picture b). We observed a chick of Giant Ibis at the nest, two months old.

An adult flew into the nest right over our heads blackening the sky and continued to a tree near-by calling alarms. Another adult bird appeared. We left around sunset and saw one adult on its regular roosting branch. One lady of a near-by community who found the nest received from SVC a financial award and is paid a daily fee for monitoring and protecting the site. The locals are committed to protecting the Giant Ibis and its numbers are stable.

On the way to the Ibis nest a lot of good birds were seen or heard, such as Western Koel, Black-headed Woodpecker (picture of male r), Blossom-headed and Red-breasted Parakeets, Green-billed Malkoha, Rufescent Prinia, Plain Prinia, Golden-fronted Leafbird, Crested Treeswift, Purple Sunbird, White-browed Fantail, Common Woodshrike, Ashy Drongo, Large Cuckooshrike, Greater Yellownape, Red-billed Blue Magpie and Lineated Barbet.

The morning of 25 April we left the lodge at 5 a.m. and tried calling for Brown Boobook, but it was too far away for me to hear. On the way to the riverside forest we saw Green Imperial-pigeons, Chinese Francolins, Black-headed Woodpeckers, several Rufous-winged Buzzards, one Grey-
headed Fish-eagle, female Plaintive Cuckoo, Ashy and Black Drongos, one Greater Racket-tailed Drongo, Black-throated Starlings, Red-billed Blue Magpies, Green-billed Malkohas, White-throated Kingfishers, Shikra. Stripe-throated Woodpecker was heard.

At the forest edge we could hear Blue-winged Pitta calling on the other side of the river. Common and Dark-necked Tailorbirds (picture l) were vocal and visible, Oriental White-eyes were foraging, Streak-eared and Black-crested Bulbuls were numerous, a flock of Pin-striped Tit-babblers appeared, one Stork-billed Kingfisher was perched by the river. A Violet Cuckoo flew over and I missed it – would have been a lifer. Hainan Blue Flycatcher and White-rumped Shama gave their beautiful songs from the forest and were seen. When walking back to the car we saw Laced Woodpecker, Black-naped Monarch and Dark-necked Prinia, heard Abbot’s Babbler. Driving out we saw Rufous Tree-pie.

During the day, we also walked around in forests and fields, and managed to see Brown Wood-owl (three individuals stay in the area), two Brown Fish-owls when they left their roost, one Lesser Adjutant, Crested Serpent-eagle, Greater and Common Flameback, Greater Yellownape was heard, one Asian Woollyneck (Stork), Brown and Dark-necked Prinia, Pied Bushchat, flocks of Small Minivet (picture of male r), Black-naped and Black-hooded Oriole, Red-rumped Swallow and Brown Shrike, and heard Indian Cuckoo. Possible sighting of Pale-capped Pigeon could not be confirmed. My two guides saw one White-shouldered Ibis in a field quite near to the lodge, but I could not see it.

As I was not successful in seeing White-shouldered Ibis, we left the lodge at 4 a.m. on 26 April and drove along a very bad country trail to an opening where we could see 14 of those birds roosting in a tree, and a 15th flew over. They became active soon after 5 a.m. when light appeared. Walking back from there we saw Rufous Woodpecker, Orange-
breasted and Yellow-footed Green-pigeons, and driving back we saw one Oriental Pied Hornbill and many Greater Coucals by the roadside.

After the morning outing we went across the main road into open forest to look for White-rumped Pygmy-falcon, and finally managed to get an excellent view of a perched male, not particularly shy (picture on the front page). Other bonuses were three Great Slaty Woodpeckers in courtship rituals, two Vernal Hanging-parrots flying over, Chestnut-headed Bee-eater (photo b). Small Minivet was abundant.

We continued towards the lodge and found immediately Rufous-bellied Woodpecker (picture of male l), but not the two Nuthatches we also expected.

Kratié

On 4 May I travelled from Phnom Penh first to Kratié, more specifically to Hampi 15 kms to the North from there, and had very good views of the Irawaddy Dolphins. Because it was noon time heat, Mekong Wagtails were resting in the forest and I could not get this as a lifer. Blue-throated Bee-eaters were
numerous. About eight Oriental Darters were present, as well as Little and Indian Cormorants, and White-throated Kingfishers. I saw two Wedge-tailed Green-pigeons fly over.

Seima Protected Forest, Mondulkiri Province

When I reached the Seima forest, I asked my driver to stop and had a good look at a flock of Thick-billed Green-pigeons, and soon also a pair of Vinous-breasted Mynas. Upon arrival at the Jahoo Gibbon Camp we soon saw a pair of Great Hornbills resting in a tree.

At sunrise, 5 a.m. on 5 May the camp supervisor, Mr. Soknai of the local indigenous people Bunong (they are the majority ethnicity in Mondulkiri Province) took me for a primate walk with his young assistant and surveyor Mr. Long, and we heard very well and saw a male Crested Gibbon singing in a tree top as if he’d been at the La Scala Opera. Amazing, marvelous music which I had experienced before in Vietnam. Another Gibbon was singing perhaps a kilometer away. In a half-an-hour the concert ended and we met no more. Instead, we followed one or more troops of Black-shanked Douc-langurs in the forest, often being quite close to them. We wore bright yellow vests – a sign to these sympathetic animals that we were friends, not enemies. During the primate walk Bulbuls were noisy, as well as Hainan Blue Flycatchers, and a few Orange-breasted Trogons were heard and seen as shadows. I had a good look in a bamboo ticket of a singing Yellow-breasted Warbler. I figured that before sunrise I had heard Scaly-capped Babblers vocalizing near my tent, and was told that they are indeed present.

Back at the camp, I observed Greater Racket-tailed Drongo, Brown-breasted Sunbird, Ochraceous and Black-crested Bulbuls. During an afternoon walk, we heard Bar-bellied Pitta, had great views of Green-eared Barbet (picture l), Blue-eared Barbet (picture b), Coppersmith Barbet, Asian Paradise-flycatcher, Asian Fairy Bluebird, both Tailorbirds, Common Iora, Great and Oriental Pied Hornbill. We had an obscure view of Germain’s Peacock-pheasant perched in shadow on a low branch next to a feeding site – one of the places where it is often seen. Also Puff-throated Bulbul came by. But no Pittas seen. Lesser Necklaced Laughingthrushes sounded a riot just behind our backs, but we did not see them.

I returned to the Jahoo Gibbon Camp with Pech Mogn the following day for lunch and to see birds, and indeed we did. Very good views of Orange-breasted Trogon,
and the Oriental Scops Owl play-back convened lots of agitated small birds, including White-bellied Erpornis, Purple-naped Spiderhunter, Plain and Yellow-vented Flowerpecker, Blue-winged Leafbird and others.

I spent the night in Sen Monorum town and on 6 April was picked up at 5:30 by Pech Mogn who took me to a beautiful fields and forests area near the Vietnamese border called Dak Dam. Along the road we had fine views of Gray-capped Woodpecker, Vinous Myna, Chestnut-tailed Starling (picture of male r), Burmese Shrike, Black and Ashy, perhaps also Hair-crested Drongo, Orange-breasted Pigeon (picture of male l), Red-breasted Parakeet, Asian Fairy Bluebird, White-breasted Kingfisher and Scarlet Minivet. On the wires there were large numbers of Barn Swallows and Ashy Woodswallows.

We stopped at forest edges and walked along sandy roads, seeing Common Hoopoe, and with play-back managed to get out into view Germain’s Peacock-pheasant – often extremely difficult to see. We heard three different males calling actively. Another absolutely lucky strike was to see fly-by of a pair of Pale-capped Pigeons – one of the most sought-after species for birders coming to Cambodia. Later Pech saw one more. A large flock of White-cheeked Laughingthrushes crossed the road right in front of us. Red Junglefowl was heard.

Playing the proper bird song we heard but could not see Maroon Oriole, and had very good views of Red-whiskered and Black Bulbuls, Black-chinned Yuhina, and the beauty, Silver-eared Mesia (picture next page). Playing the call of Oriental Scops-owl we got to see Plain, Fire-breasted and Scarlet-backed Flowerpecker, Crimson, Purple, Ruby-throated and Black-throated Sunbird, White-browed Shrike-babbler (this was a lifer for my guide Pech! picture r), and Bar-winged Flycatcher-shrike. We looked at a nest hanging over the road, and who was peeking out: Silver-breasted Broadbill! We had good looks at Black Eagle and Crested Serpent-eagle, and observed many Chinese Francolins.

Towards the sunset Pech took me to a riverine forest belonging to the Sen Monorum town electricity company where one could walk along a cemented road. About the first bird encountered was little known Black-browed Fulvetta, singing briskly in the foliage. New species for this trip were flocks of Pin-tailed Green-pigeon and Mountain Imperial-pigeon, several Annam Barbets, two Violet-fronted Nuthatches, Hair-crested Drongo with juvenile, male Red-headed Trogon, Barred Cuckoo-doves and, surprise, a Collared Scops-owl.
which came up to see what we were doing. Lots of noisy **Puff-throated Bulbuls**, a couple of **Black-headed, Ashy** and **Red-whiskered Bulbuls**, several **Green Imperial Pigeons**.

![Image of a Puff-throated Bulbul](image)

**On the road**

Driving out from Sen Monorum before 6 a.m. on 7 April still in the Seima forest I saw **Lesser Coucal** on the road, likewise a group of three **White-shouldered Starlings** which are passage migrants, and a couple of **Oriental Pied Hornbills** flying over the road. Later in a village I saw **Racket-tailed Treepie**. In the Mekong river wetlands approaching Phnom Penh I saw **Large-billed Crows** and my only **Green-backed Heron**.

Another day, driving out of Phnom Penh towards Siem Reap, I had seen in Sampong Chey village **Plain-backed Sparrows**, and **House Sparrows** near Siem Reap. Feral **Rock Pigeons** were frequent in most towns. Occasional **Little Egrets** were seen in farming areas. **Common Myna** was omnipresent.

Near Siemp Reap in the Angkor Wat temple area, my best observation was a pair of **Brown-backed Needletails** at Ta Phrom temple. Several Shikras I saw, male and female; and **Blue Rock-Thrush**, **Little Cormorant** plus **Great Myna** at the Angkor Wat ruins.

**Phnom Penh town**

In Phnom Penh, at the large green area attached to the residence of the Ivanovs, I observed **Sunda Pied Fantail**, a lifer (picture r). Other species present were **Eurasian Tree Sparrow**, **White-throated Fantail**, **Brown-breasted** and **Olive-backed Sunbird**, **Collared Kingfisher**, **Oriental Magpie-robin**, **Yellow-vented** and **Stripe-eared Bulbul**, **Common Tailorbird**, surprisingly one **Ochraceous Bulbul**, feral **Zebra Dove** and **Eastern Spotted Dove**, and in a tall telecommunications tower one **Black Baza** and a singing ** Plaintive Cuckoo**. In the sky, **House Swifts** and occasional **Red-rumped Swallows**. By the Tonle Sap River, I saw from the Foreign Correspondents’ Club restaurant one juvenile **Gray-headed Fish-eagle**!
**Kep Province**

Three days and three nights (31.4.-3.5.) in Kep town, Kep Province, in the South by the sea and very close to the Vietnamese border I made morning and evening walks to the Kep National Park. At the lush Mea Lea Resort there was a resident pair of Common Hill Mynas with whom I could carry a whistling contest. A pair of Collared Kingfishers along the coastal road. The forests held White-rumped Shama (picture r); Greater and Lesser Coucal; Common Tailorbird; Black-crested, Sooty-headed, Streak-eared (picture l), and Stripe-throated Bulbuls; Red-billed Blue Magpie; as well as Coppersmith and Lineated Barbets. In the National Park I saw Plain-throated Sunbird, and repeatedly Puff-throated Babblers which did not seem to mind my presence at all. A Shama nest was just a meter from the trail. One morning a Blue-winged Pitta flew almost between my legs. Large flocks of Pin-striped Tit-babblers were noisy in low bushes, and near-by I saw one Buff-throated Babbler. There was a Thick-billed Green-pigeon perched with a chick.

A trip to the Rabbit Island, only a 20 minutes boat ride away, brought in the flowering coconut palms Maroon-breasted (Van Hasselt’s, picture of male r), Olive-backed, Purple and Brown-breasted Sunbirds (picture of male l); Oriental White-eyes; and Common Ioras. Yellow-vented Bulbul was common. In the forest I saw female Scaly-bellied Munia, and in the garden area Radde’s Warbler, Oriental Magpie-robin and one Weaverbird, could not see which species. The beach was gorgeous and local seafood very tasty and fresh.

**Omissions**

Because of somewhat limited time, I decided to leave out a number of interesting endemic species. Prek Toal wetland adjacent to Tonle Sap lake in Siem Reap Province would have provided Milky Stork, and one separate location White-winged Duck. While being in the right region, I
failed to see Black-and-buff Woodpeckers, Brown-rumped Minivet, Golden-crowned Myna, Chestnut-headed Partridge and Asian Golden Weaver which were on my wish-list. I fell very short on my wishes for Pittas. I did not plan to go to the higher elevations at all which could have offered several lifers like the endemic Cambodian Laughingthrush. For lack of guidance, I did not go to look for the newly described endemic Cambodian Tailorbird near Phnom Penh.

I can recommend warmly birding in Cambodia. It was extremely rewarding to observe three critically endangered, four vulnerable and seven near-threatened species. Investing a little bit more time a visitor could easily observe additional Cambodian or Indochinese endemics. The country is quite safe.

Animals

I was pleased to observe Yellow-cheeked Crested Gibbon, albeit briefly, and for a full morning Black-shanked Douc-langoors (picture I). Long-tailed Macaques were common in the Angkor Wat area and in the Kep National Park. Variable (red-tailed) Squirrels were common in Preah Vihar, and Giant Black Squirrels could be seen in the Seima Forest. I saw Gray-bellied Squirrel near Sen Monorum, and Indochinese Ground-Squirrel (with four white gloves!) in the Kep National Park. Spending one hour with the Irawaddy Dolphins near Kratie was a superb experience. Indochinese Flying Lizard was seen in Dak Dam. Also many unidentified lizards, and probable Indochinese Rat Snake in Preah Vihar.

List of species seen and/or heard

Lifers in bold also if previously only heard, now seen

Germain’s Peacock-pheasant *Polyplectron germaini* NEAR THREATENED 3 calling at Dak Dam, also camp

Asian Blue (breasted) Quail *Synoicus chinensis* one male flushed at Bengal Florican grasslands

Chinese Francolin *Francolinus pintadeanus* common in Tmatboey and Dak Dam

Red Junglefowl *Gallus gallus* heard in Tmatboey and Dak Dam

African Comb Duck *Sarkidiornis melanotos* one female at Bengal Florican grasslands
Indian Spot-billed Duck *Anas poecilorhyncha* small flocks at the Bengal Florican grasslands

Rock Dove (Feral) *Columba livia* common in larger towns

**Pale-capped Pigeon** *Columba punicea* **VULNERABLE** one pair in Dak Dam

Red (Collared) Turtle-dove *Streptopelia tranquebarica* Bengal Florican grasslands and Tmatboey

Eastern Spotted Dove *Streptopelia chinensis* common in most places, town and country

Barred Cuckoo-dove *Macropygia unchali* pairs flying near Sen Monorum town

Zebra Dove *Geopelia striata* Feral in larger towns like Phnom Penh, Siem Reap

Orange-breasted Green-pigeon *Treron bicinctus* several in Tmatboey, also Dak Dam

Thick-billed Green-pigeon *Treron curvirostra* one flock in Seima Forest, also Kep National Park, Rabbit Island

Yellow-footed Green-pigeon *Treron phoenicopterus* small flock in Tmatboey

Pin-tailed Green-pigeon *Treron apicauda* one flock near Sen Monorum

**Wedge-tailed Green-pigeon** *Treron sphenurus* one pair near Kratié

Green Imperial-pigeon *Ducula aenea* small groups in Tmatboey and near Sen Monorum

Mountain Imperial-pigeon *Ducula badia* small flock near Sen Monorum

Crested Treeswift *Hemiprocn e coronata* small numbers in Tmatboey

**Brown-backed Needletail** *Hirundapus giganteus* one pair in Siem Reap temple region

Asian Palm Swift *Cypsiurus balasiensis* common in Bengal Florican grasslands, Angkor Wat area

House Swift *Apus nipalensis* common in towns, big and small

Greater Coucal *Centropus sinensis* common in Tmatboey, Mondulkiri and Kep Provinces

Lesser Coucal *Centropus bengalensis* in Seima Forest and Kep Province

Green-billed Malkoha *Phaenicophaeus tristis* Tmatboey, Seima, Dak Dam

Western (Asian) Koel *Eudynamus scolopaceus* Tmatboey, Angkor Wat, Kep Province

(Violet Cuckoo *Chrysococcyx xanthorhynchus* only seen by my guide Kunthea)

Plaintive Cuckoo *Cacomantis merulinus* female in Tmatboey, singing male in Phnom Penh

**Indian Cuckoo** *Cuculus micropterus* vocalising males in Tmatboey

Ruddy-breasted Crake *Porzana fusca* one flushed at Bengal Florican grasslands

White-breasted Waterhen *Amaurornis phoenicurus* Bengal Florican grasslands, Tmatboey

Sarus Crane *Grus antigone* **VULNERABLE** group of 4 flying at Bengal Florican grasslands

Bengal Florican *Houbaropsis bengalensis* **CRITICALLY ENDANGERED** at glasslands 12 males, one female
Lesser Adjutant *Leptotilos javanicus* **VULNERABLE** one subadult in Tmatboey

Asian Woollyneck (Stork) *Ciconia episcopus* one in Tmatboey feeding in cultivation

**White-shouldered Ibis** *Pseudibis davisoni* **CRITICALLY ENDANGERED** 14 birds in roosting tree, Tmatboey

**Giant Ibis** *Pseudibis gigantea* **CRITICALLY ENDANGERED** two adults, one chick at nest in Tmatboey

Green-backed (Striated) Heron *Butorides striata* one in marshland near Phnom Penh

Chinese Pond-heron *Ardeola bacchus* individuals seen near water in many places

Grey Heron *Ardea cinerea* one at Bengal Florican grasslands

Little Egret *Egretta garzetta* individuals seen in farming areas

Little Cormorant *Phalacrocorax niger* flock at Angkor Wat, several in Kratié

Indian Cormorant *Phalacrocorax fuscicollis* several in Kratié

Oriental Darter *Anhinga melanogaster* **NEAR THREATENED** about 8 in Kratié

Pacific Golden Plover *Pluvialis fulva* one in breeding plumage at Bengal Florican grasslands

Little Ringed Plover *Charadrius dubius* one at Bengal Florican grasslands

**Oriental Plover** *Charadrius veredus* two in breeding plumage at Bengal Florican grasslands

Red-wattled Lapwing *Vanellus indicus* one pair at Bengal Florican grasslands

Green Sandpiper *Tringa ochropus* one heard at Bengal Florican grasslands

Common Greenshank *Tringa nebularia* one at Bengal Florican grasslands

Common Buttonquail *Turnix sylvaticus* common at Bengal Florican grasslands, also chicks

Oriental Pratincole *Glareola maldivarum* common at Bengal Florican grasslands, also chicks

(Brown Boobook *Ninox scutullata* my guides heard it, I did not)

(Asian Barred Owlet *Glaucidium cuculoides* Pech Mogn heard it in Dak Dam)

Collared Scops-owl *Otus lettia* one seen near Sen Monorum town

**Brown Wood-owl** *Strix leptogrammica* Tmatboey, presence of 3

**Brown Fish-owl** *Ketupa zeylonensis* two flew off from roosting tree

Black-winged Kite *Elanus caeruleus* one flying at Bengal Florican grasslands

Black Baza *Aveda leuphotes* one male perched in telecom tower in Phnom Penh

Crested Serpent-eagle *Spilornis cheela* seen near Kor Ker, Tmatboey, Dak Dam

Black Eagle *Ictinaetus malaiensis* one flying near Dam Dam

Shikra *Accipiter badius* several seen in Angkor Wat area, Tmatboey

Grey-headed Fish-eagle *Ichtyophaga ichtyaetus* **NEAR THREATENED** adult in Tmatboey, juv. Phnom Penh
**Rufous-winged Buzzard** *Butastur liventer* common in Tmatboey

**Orange-breasted Trogon** *Harpactes oreskios* common in Seima Forest

**Red-headed Trogon** *Harpactes erythrocephalus* one male near Sen Monorum

Great Hornbill *Buceros bicornis* **NEAR THREATENED** frequently seen and heard near Gibbon camp, Seima

Oriental Pied Hornbill *Anthracoceros albirostris* one in Tmatboey, several in Seima forest

Common Hoopoe *Upupa epops* Kep Province and Dak Dam

Asian Green Bee-eater *Merops orientalis* numerous at Bengal Florican Grasslands, Tmatboey

Chestnut-headed Bee-eater *Merops leschenaulti* singles in Tmatboey

Blue-throated Bee-eater *Merops viridis* common by the Mekong river in Kratié

Blue-tailed Bee-eater *Merops philippinus* common at Bengal Florican grasslands and Tmatboey

**Indochinese Roller** *Coracias affinis* frequent along roads and in open forest

Pied Kingfisher *Ceryle rudis* one fishing at Bengal Florican grasslands

Stork-billed Kingfisher *Pelargopsis capensis* one by the river in Tmatboey

White-breasted Kingfisher *Halcyon smyrnensis* frequent along roads in Tmatboey, Dak Dam

Collared Kingfisher *Todiramphus cloris* Kep town, Phnom Penh gardens

Coppersmith Barbet *Psilopogon haemacephalus* common in Phnom Penh, Siem Reap, Tmatboey, Dak Dam

Blue-eared Barbet *Psilopogon duvaucelli* frequent in Tmatboey, also Dak Dam

Green-eared Barbet *Psilopogon faiostictus* common in Tmatboey

Lineated Barbet *Psilopogon lineatus* most common in Siem Reap

Annam Barbet *Psilopogon annamensis* individuals near Sen Monorum

Greater Flameback *Chrysocolaptes guttacristatus* one in Tmatboey

Common Flameback *Dinopium javanense* several in Tmatboey

Rufous Woodpecker *Micropternus brachyurus* 2 males in Tmatboey

**Greater Yellownape** *Picus flavinucha* heard in Tmatboey

Streak-throated Woodpecker *Picus xanthopygaeus* heard in Tmatboey

Laced Woodpecker *Picus vittatus* female seen in Tmatboey

**Black-headed Woodpecker** *Picus erythropygius* common around Tmatboey

Great Slaty Woodpecker *Mulleripicus pulverulentus* **VULNERABLE** 3 seen and several heard, Tmatboey
Grey-capped Piculet *Dendrocopos canicapillus* several seen in Dak Dam

**Rufous-bellied Woodpecker** *Dendrocopos hyperytrus* near Tmatboey village

**White-rumped Pygmy-falcon** *Polihierax insignis* NEAR THREATENED female near Koh Ker, male in Tmatboey

Vernal Hanging-parrot *Loriculus vernalis* pairs flew over in Tmatboey and Dak Dam

Blossom-headed Parakeet *Psittacula roseata* NEAR THREATENED heard in Tmatboey

Red-breasted Parakeet *Psittacula alexandri* NEAR THREATENED common in Tmatboey, Dak Dam

Bar-bellied Pitta *Hydrornis elliotii* heard at Jahoo Gibbon Camp, Seima

**Blue-winged Pitta** *Pitta moluccensis* heard in Tmatboey, seen in Kep National Park

**Silver-breasted Broadbill** *Serilophus lunatus* at nest in Dak Dam

**Maroon Oriole** *Oriolus triaillii* heard at length in Dak Dam, not seen

Black-hooded Oriole *Oriolus xanthornus* several at Angkor Wat, Tmatboey

Back-naped Oriole *Oriolus chinensis* a few in Tmatboey, Phnom Penh town

**White-browed Shrike-babbler** *Pteruthius aeralatus* one in Dak Dam (first record there?)

**White-bellied Erpornis** *Erpornis zantholeuca* one in Seima forest near Jahoo Gibbon Camp

**Small Minivet** *Pericrocotus cinnamomeus* common in Tmatboey

Scarlet Minivet *Pericrocotus speciosus* one flock in Dak Dam

Large Cuckoo Shrike *Coracina macei* common in Tmatboey

Ashy Woodswallow *Artamus fuscus* large flocks near Dak Dam

Bar-winged Flycatcher-shrike *Hemipus picatus* one pair in Dak Dam

Common Woodshrike *Tephrodornis virgatus* common in Tmatboey

Common Iora *Aegithina tiphia* singles in Tmatboey, Angkor Wat

Great Iora *Aegithina lafresnayeii* Tmatboey

Sunda Pied Fantail *Rhipidura javanica* one in a garden in Phnom Penh

White-browed Fantail *Rhipidura aureola* heard at Bengal Florican grasslands, seen Tmatboey

White-throated Fantal *Rhipidura albicollis* several in Phnom Penh town

Black Drongo *Dicrurus macrocircus* Siem Reap, Phnom Penh, Tmatboey, Dak Dam

Ashy Drongo *Dicrurus leucophaeus* common in Tmatboey, Dak Dam

Bronzed Drongo *Dicrurus aeneus* on seen on roadside near Siem Reap
Hair-crested Drongo *Dicrurus hottentottus* adult with juvenile near Sen Monorum, possibly Dak Dam

Greater Racket-tailed Drongo *Dicrurus paradiseus*, individuals seen in Tmatboey, Seima, Dak Dam

Black-naped Monarch *Hypothymis azurea* singing male in Tmatboey

Oriental (Blyth’s) Paradise-flycatcher *Terpsiphone affinis* male in Tmatboey

Brown Shrike *Lanius cristatus* individuals in Tmatboey

Burmese Shrike *Lanius collurioidees* along roadsides, Dak Dam

Racket-tailed Treepie *Crypsina terna* one seen in a village near Kampong Cham

Rufous Treepie *Dendrocitta vagabunda* one in Tmatboey

Red-billed Blue Magpie *Urocissa erythrorhyncha* small flocks in Tmatboey

Large-billed Crow *Corvus macrohynchos* marshland near Phnom Penh
